Thank you for the excellent training your program provided. I liked how your program was divided into a didactic and clinical rotation. The didactic portion provided by Dr. Coulter and various Respiratory Therapists was very comprehensive, and presented in an easy to learn format. I was amazed, and pleased, to see how this information was applied during my clinical portion. It was certainly apparent when I heard over and over again from various Respiratory Therapists about the - Assess and Treat protocol, the science behind Pressure Control ventilation and PEEP - and to see these protocols applied immediately on a patient. The Respiratory Therapists were **GREAT** (thank you!!)! They took the time to provide some critical thinking questions and explanations in light of their heavy caseload. The rapport between the pulmonologist (Dr. Coulter (Jr.) and RT in managing a very critical patient was a very refreshing site. The lab on the last day was a very nice way of tying everything together. Nothing beats a visual picture of collapsed alveoli (pig's lung), and the effect when PEEP (pressure controlled) is applied. Providing us scenarios in a controlled environment, with actual hands-on equipment training solidified what was presented and seen the days prior. Your program was excellent, and I would recommend it to healthcare providers who care for patients on ventilator, or patients with respiratory conditions.

Thank you!
